Submission Date: 1st October 2021

Introduction

Our motivation behind this project is to grow our already existing academy start-up. We connect teachers and students by providing online/home tutors for all kinds of students across the city.

After launching the app we expect to grow nationally and in the future internationally. Our customers are Students and Teachers both.

The project will provide a platform where students can find the perfect tutor according to their requirements such as Area, Board, Subject etc.

Tutors can find students according to their expertise and ease.

The idea of this startup is being practiced everywhere but we are the first to launch it in E-form.

The basic structure will be built in the next 3 months, After the final touches it will be launched within 6 months for the users.

Features of Application

- Registration of Students and Tutors on the platform.
- Searching for a Tutor.
- Providing best possible results according to the requirements.
- Analytical report for business analyst.
- User friendly Interface.

Project Scope

- A user will be able to register as a tutor or student.
- A student will be able to search for a tutor.
- The contact details of the tutor will be provided to the student in order to contact.
- There will not be a way to communicate on the app.
- The tutor will be notified about students if they want to contact.
- There will be visuals to check the insights for the admin.

Technologies Used

- Android Studio (Mac/Windows)
- Sqlite Database
- XML-Frontend
- JAVA-Backend
